# The contrasting geometric typeface.

## ALPHA

Meet Yocco, the typeface that takes geometry to the max, with barely a hint of contrast.

In this alpha stage, the Yocco family flaunts its basic glyphset across three weights: Light, Regular, and Bold. What sets it apart? Purposefully closed endings on select letters like 'a,' 'c,' 'e,' and 'g,' resulting in distinctive and sturdy shapes. From this, a nifty Lumos axis feature has been designed to enhance legibility in smaller sizes.. It's all about playing with open endings and junction contrasts!

Stay tuned for future updates, as we plan to introduce more glyphs and OpenType features to expand our glyph set.
