ABOUT

- Drive Medium - 50pt

- Drive Light - 10pt

- Drive Bold - 450pt

Space-saving letterforms help fit more text on a line.

Drive is a humanist-style sans serif typeface, optimised both for use in print and on screen. To help facilitate economic typesetting, its space-saving letterforms help fit more text on a line, without sacrificing readability. Drive's letterforms feature open counters, helping text set in it remain clear, even under adverse reading conditions. Characters are drawn with virtually-monolinear strokes. The family includes nine different weights (Hairline through Extrabold); each has corresponding upright and italic fonts. While Drive is optimised for use in small sizes, the extreme weights are well-suited for headlines and large-sized text. Each font's character set has over 500 glyphs, including directional arrows, pre-composed fractions, oldstyle figures, and both proportional and tabular lining figures.

Time is valuable in corporate environments. Unlike the text in books, business communication and financial reports aren't necessarily read for pleasure. Their contents must be understood quickly. When it comes to commerce, the typeface just can't afford to get in the way. Drive is a family of sans serif fonts. To help facilitate more economic typesetting, its space-saving letterforms help fit more text on a line, without sacrificing any readability. Since Drive is designed in a humanist style, the counterforms inside its letters are open; texts set in Drive remain clear, even under adverse reading conditions. The Drive family includes nine weights, ranging from the very thin Hairline weight through a heavy Extrabold. Every weight has corresponding upright and italic fonts. Characters are drawn with virtually-monolinear strokes; each part of any given letterform is equally sharp. Thanks to the family's wide number of fonts, users can combine multiple weights together to increase contrast within a design's text. While Drive is optimised for use at smaller sizes, its extreme weights are well-suited for setting headlines and other large texts. Drive is suitable for print-based designs, as well as for on-screen usage.
